This study aims to determine the burden of mental health challenges at the University of Ibadan and to develop and pilot a pragmatic and holistic university mental health service that covers the spectrum of mental health promotion, prevention, early identification and treatment as well as supportive rehabilitation for both staff and students.

- ii. Morgan et al. INTernational Research Programme on Psychoses In Diverse Settings (INTREPID III): Deepening and Broadening Knowledge of Psychoses Globally. Funded by the UK Medical Research Council. Role: Co-investigator

This project is a continuation of INTREPID III, which studied the variation in the incidence, clinical presentation, 2-year outcome, help-seeking patterns, disability and physical comorbidity among persons with psychosis, compared with age-, sex- and neighbourhood-matched relatives and controls. This current project seeks to conduct investigations along four workstreams. In workstream 1, we will study researcher-defined and person with lived-experience-defined patterns and predictors of medium-term course and outcomes of psychosis, as well as investigate the profiles and needs of homeless persons with psychosis; in workstream 2, we will examine the mechanisms and processes that mediate risk, relapse and outcomes (stress sensitivity, cognitive functions and accelerated aging); in workstream 3, we will develop a web-based global study catalogue and data sharing platform of studies of psychotic disorders to pool data for novel analysis; in workstream 4, we will develop interventions targeted at persons with psychosis and their families to promote recovery.
